

# GRIDMANAGE DISK / STORAGE

Take control of your storage.

Storage requirements are skyrocketing, and so is the cost of managing storage. As organizations migrate to networked storage, the need to attract and maintain skilled administrators becomes more critical – and doing so becomes more difficult.

Incentra helps you align your ever-growing storage infrastructure with your evolving business. By combining consulting, technology, and outsourcing services, we create customized solutions to keep your storage running properly – and at an affordable cost.

GridManage Disk / Storage, our proprietary storage management service, provides the power of SAN technology without a full-time investment in administrators and management tools. Our flexible offerings enable you to buy as much or as little administrative help as you need. Plus, you'll leverage the experience we've gained from managing storage arrays for hundreds of clients and selling petabytes of storage every year.

# Cut costs, ensure your data, and simplify the complexities of networking your storage with GridManage Disk / Storage.

## Realize the full impact of your IT investments

Through our unique combination of consulting, technology, and outsourcing services, we help you maximize every dollar invested in your IT. Whether you use us selectively or comprehensively, we will leverage the full breadth of our experience to help you meet your specific business needs – efficiently and cost-effectively.

**Consulting** – Our consulting services help you understand your business needs, provide visibility into your infrastructure, and give you specific recommendations and action plans to achieve your goals.

**Technology** – As a single source for your data center technology needs – from servers and storage to networks and security – we provide a better technology experience. From more than 100 leading brands, we'll help you select, install, and support your data center technologies at competitive pricing.

**Outsourcing** – Our customized outsourcing services address your specific needs for performance, cost, and reliability. We manage server, network, storage, and security solutions 24x7 to ensure your IT investments are optimized. Reduce your cost and risk of IT infrastructure operations by leveraging our toolset, people, and processes for continuous improvement.

## On-demand SAN administration

Before we assume any management activities – whether selective or comprehensive – we will evaluate your current infrastructure to determine how well your organization is utilizing its storage. During this Storage Usage Assessment, we gain an understanding of your environment and make recommendations for changes or upgrades. Then, we develop an ongoing management model that establishes our role and the health metrics on which to focus.

GridManage Disk / Storage includes:

- Expert attention to ensure your infrastructure is running properly and is aligned with your business needs
- 24x7 monitoring through our state-of-the-art Network Operations Center (NOC)
- Proactive administration of complex tasks, patches, and upgrades
- Fast problem identification and resolution
- Regular reviews of your infrastructure to protect its health and to ensure capacity for future needs

## How can Incentra impact your IT?

- Protect your assets with round-the-clock coverage from the threats that can result in productivity, regulatory, and business reputation liabilities
- Visibly demonstrate your commitment to information security
- Eliminate the need for capital outlay for monitoring infrastructure
- Receive affordable, broad-range security expertise
- Respond proactively to threats
- Stay informed on the status of your protection with on-demand, full visibility into your infrastructure's security
