

# GRIDMANAGE SECURITY

Relevant, affordable, visible protection.

Organizations need to protect critical data assets and prove to their stakeholders that they've taken the steps to do so. But threats and challenges make effectively managing security even harder. Good thing Incentra has a solution. By combining consulting, technology, and outsourcing, Incentra delivers cost-effective protection that adjusts as your needs change over time.

# Protect your organization and show your due diligence to stakeholders with Incentra's GridManage Security.

## Realize the full impact of your IT investments

Through our unique combination of consulting, technology, and outsourcing services, we help you maximize every dollar invested in your IT. Whether you use us selectively or comprehensively, we will leverage the full breadth of our experience to help you meet your specific business needs – efficiently and cost-effectively.

**Consulting** – Our consulting services help you understand your business needs, provide visibility into your infrastructure, and give you specific recommendations and action plans to achieve your goals.

**Technology** – As a single source for your data center technology needs – from servers and storage to networks and security – we provide a better technology experience. From more than 100 leading brands, we'll help you select, install, and support your data center technologies at competitive pricing.

**Outsourcing** – Our customized outsourcing services address your specific needs for performance, cost, and reliability. We manage server, network, storage, and security solutions 24x7 to ensure your IT investments are optimized. Reduce your cost and risk of IT infrastructure operations by leveraging our toolset, people, and processes for continuous improvement.

Effective security costs money and often requires behavior adjustments. Heavy-handed security programs can make your data just as vulnerable as lax programs. Thus, striking the right balance among cost, convenience, and risk mitigation is critical.

Incentra understands this balance is different for every business. That's why we've developed GridManage Security – a complete security program tailored to fit the needs of each business. Whether you use our program selectively or comprehensively, GridManage Security protects your infrastructure and demonstrates your due diligence to stakeholders.

Leveraging our experience protecting data for thousands of companies throughout the world, we customize programs to address the specific risks facing your business – balancing security with your acceptable level of cost and processes.

- Assess vulnerabilities in your environment
- Recommend remediation steps to ensure your money and IT security policy are focused on the most appropriate issues
- Execute recommended steps or work with in-house and third-party service organizations to complete necessary remediation
- Monitor your infrastructure 24x7 to protect your perimeter against threats
- Provide optional services including anti-spam, anti-virus, and URL filtering
- Regularly review your security to assess if further attention is needed to protect your infrastructure

- Perform ad hoc vulnerability assessments to validate your security after any significant events, such as office relocations, personnel departures, or infrastructure changes
- Provide written reports to reassure your stakeholders that you're proactively protecting the business

## How can Incentra impact your IT?

- Protect your assets with round-the-clock coverage from the threats that can result in productivity, regulatory, and business reputation liabilities
- Visibly demonstrate your commitment to information security
- Eliminate the need for capital outlay for monitoring infrastructure
- Receive affordable, broad-range security expertise
- Respond proactively to threats
- Stay informed on the status of your protection with on-demand, full visibility into your infrastructure's security
